Notice of Meeting for the Historic and Architectural Review Commission of the City of Georgetown February 25, 2021 at 6:00 PM at Virtual

The City of Georgetown is committed to compliance with the Americans with Disabilities Act (ADA). If you require assistance in participating at a public meeting due to a disability, as defined under the ADA, reasonable assistance, adaptations, or accommodations will be provided upon request. Please contact the City Secretary's Office, at least three (3) days prior to the scheduled meeting date, at (512) 930-3652 or City Hall at 808 Martin Luther King Jr. Street, Georgetown, TX 78626 for additional information; TTY users route through Relay Texas at 711.

The regular meeting will convene at 6:00pm on February 25, 2021 via teleconference. To participate, please copy and paste the weblink into your browser:

Weblink: https://bit.ly/35f0rPn Webinar ID: 979 7139 1504

Password: 639236

To participate by phone:

Call in numbers: (346) 248-7799 or Toll-Free: 833-548-0276

Password: 639236

Citizen comments are accepted in three different formats:

- 1. Submit written comments to planning@georgetown.org by 5:00p.m. on the date of the meeting and the Recording Secretary will read your comments into the recording during the item that is being discussed.
- 2. Log onto the meeting at the link above and "raise your hand" during the item
- 3. Use your home/mobile phone to call the toll-free number

To join a Zoom meeting, click on the link provided and join as an attendee. You will be asked to enter your name and email address (this is so we can identify you when you are called upon). To speak on an item, click on the "Raise your Hand" option at the bottom of the Zoom meeting webpage once that item has opened. When you are called upon by the Recording Secretary, your device will be remotely un-muted by the Administrator and you may speak for three minutes. Please state your name clearly, and when your time is over, your device will be muted again.

Use of profanity, threatening language, slanderous remarks or threats of

harm are not allowed and will result in you being immediately removed from the meeting.

Regular Session

(This Regular Session may, at any time, be recessed to convene an Executive Session for any purpose authorized by the Open Meetings Act, Texas Government Code 551.)

- A Discussion on how the Historic and Architectural Review Commission virtual conference will be conducted, to include options for public comments and how the public may address the Commission -- Sofia Nelson, CNU-A, Planning Director
- B The Historic and Architectural Review Commission, appointed by the Mayor and the City Council, is responsible for hearing and taking final action on applications, by issuing Certificates of Appropriateness based upon the City Council adopted Downtown Design Guidelines and Unified Development Code.

Welcome and Meeting Procedures:

- · Staff Presentation
- · Applicant Presentation (Limited to ten minutes unless stated otherwise by the Commission.)
- · Questions from Commission to Staff and Applicant
- · Comments from Citizens*
- · Applicant Response
- · Commission Deliberative Process
- · Commission Action
- * Once staff and the applicant have addressed questions from the Commissioners, the Chair of the Commission will open the public hearing. The chair will ask if anyone would like to speak. To speak, click on the "Raise Your Hand" option at the bottom of the Zoom meeting webpage. Your device will be remotely un-muted and you may speak for three minutes. Please state your name and address clearly. A speaker may allot their time to another speaker for a maximum of 6 minutes. If a member of the public wishes to allot their time to another speaker, they may do so when their name is called by the Chair. Please remember that all comments and questions must be addressed to the Commission, and please be patient while we organize the speakers during the public hearing portion. When your time is over, your device will be muted again.
- After everyone who has asked to speak has spoken, the Chair will close the public hearing and provide a few minutes of rebuttal time to the applicant if they so choose.

Public Wishing to Address the Board

On a subject that is posted on this agenda: Please fill out a speaker registration form which can be found at the Board meeting. Clearly print your name, the letter of the item on which you wish to speak, and present it to the Staff Liaison, preferably prior to the start of the meeting. You will be called forward to speak when the Board considers that item.

On a subject not posted on the agenda: Persons may add an item to a future Board agenda by filing a written request with the Staff Liaison no later than one week prior to the Board meeting. The request must include the speaker's name and the specific topic to be addressed with sufficient information to inform the board and the public. For Board Liaison contact information, please logon to

http://government.georgetown.org/category/boards-commissions/.

C At the time of posting, no persons had signed up to address the Board.

Legislative Regular Agenda

- D **Public Hearing** and **Possible Action** on a request for a **Certificate of Appropriateness** (COA) for rooftop HVAC, mechanical or communication equipment that result in modifications to the building facade at the property located 410 E. , and remained so posted for at least 72 continuous hours preceding the schedule.	uled time of said
meeting.	
Robyn Densmore, City Secretary	

City of Georgetown, Texas Historic and Architectural Review February 25, 2021

SUBJECT:

Public Hearing and **Possible Action** on a request for a **Certificate of Appropriateness** (COA) for rooftop HVAC, mechanical or communication equipment that result in modifications to the building facade at the property located 410 E. University Avenue, bearing the legal description Block 2 of the Hughes Addition. (2020-30-COA) – Britin Bostick, Downtown & Historic Planner

ITEM SUMMARY:

In their meeting on July 23, 2020 HARC approved modifications to the main sanctuary building at First United Methodist Church. The modifications included the installation of an Outdoor Air (OA) louver for a proposed new Heating, Ventilation and Air Conditioning (HVAC) system to be installed for the main church building and sanctuary. The louver was proposed to be installed in the west façade of the historic portion of the building, above the roof of the c. 1930 addition and on the west side of the sanctuary building.

Following revisions to the project the applicant is requesting HARC approval of a change to the proposed building modifications. Rather than installing the louver originally proposed and based on changes to the layout and function of the HVAC system, the applicant is now requesting to install an access door in the same location that was previously proposed to have a louver. The door opening would have a different size and orientation but would be similar in impact to the building façade and is proposed to be painted to match the existing limestone wall.

FINANCIAL IMPACT:

None. The applicant has paid the required application fees.

Historic and Architectural Review Commission

Meeting Date: *February 25, 2021*File Number: 2020-30-COA

AGENDA ITEM DESCRIPTION

Public Hearing and Possible Action on a request for a Certificate of Appropriateness (COA) for rooftop HVAC, mechanical or communication equipment that result in modifications to the building facade at the property located 410 E. University Avenue, bearing the legal description Block 2 of the Hughes Addition.

AGENDA ITEM DETAILS

Project Name: First United Methodist Church HVAC and Sanctuary Renovation

Applicant: Alfred Brice (FGM Architects)
Property Owner: First United Methodist Church

Property Address: 410 E. University Avenue

Legal Description: Block 2 of the Hughes Addition
Historic Overlay: Old Town Overlay District

Case History: HARC previously approved the installation of a louver via 2020-30-COA

HISTORIC CONTEXT

Date of construction: 1891-1893 (HRS)

Historic Resources Survey Level of Priority: High

National Register Designation: First Methodist Church (Individually Listed)
Texas Historical Commission Designation: Recorded Texas Historic Landmark (1974)

APPLICANT'S REQUEST

HARC:

✓ Rooftop HVAC, mechanical or communication equipment that result in modifications to the building façade

HPO:

✓ Rooftop HVAC, mechanical or communication equipment that result in no modifications to the building facade

STAFF ANALYSIS

In their meeting on July 23, 2020 HARC approved modifications to the main sanctuary building at First United Methodist Church. The modifications included the installation of an Outdoor Air (OA) louver for a proposed new Heating, Ventilation and Air Conditioning (HVAC) system to be installed for the main church building and sanctuary. The louver was proposed to be installed in the west façade of the historic

Historic and Architectural Review Commission

portion of the building, above the roof of the c. 1930 addition and on the west side of the sanctuary building.

Following revisions to the project the applicant is requesting HARC approval of a change to the proposed building modifications. Rather than installing the louver originally proposed and based on changes to the layout and function of the HVAC system, the applicant is now requesting to install an access door in the same location that was previously proposed to have a louver. The door opening would have a different size and orientation but would be similar in impact to the building façade and is proposed to be painted to match the existing limestone wall.

Staff provided the following analysis to HARC in the first hearing on this application:

"The proposed upgrade to the building's HVAC system requires a larger volume of outside air supplied to the attic space of the church's sanctuary building than is presently available, and the applicant is therefore requesting HARC approval to remove a section of the stone on the west façade above the roof of the c. 1930 addition so that a painted aluminum louver can be installed that would permit increased air flow into the attic space to supply the new system. Locating the louver on the west façade provides the least visual impact to the structure as well as places the louver on the side of the structure in which other mechanical units and equipment are already installed. Although an alteration to the street-facing façade, the louver is anticipated to only be visible from the second block to the west along University Ave due to the addition. The stone is proposed to be removed in sections and supported by a steel angle above the opening, and the louver installed in the opening with flashing around the louver unit so that it will be watertight and so that any water that does infiltrate the stone wall can "weep" out or move back to the exterior of the wall, rather than stay in the stone or in the interior of the space. The aluminum louver is proposed to be painted "Ivory" to match the stone and be as inobtrusive as possible. Included in this project is the installation of new rooftop condenser units with screening, which is reviewed by the HPO."

The Methodist Church is closely tied to Georgetown's development, as well as Southwestern University, and what is known today as First United Methodist Church has been listed on the National Register of Historic Places as well as designated as a Recorded Texas Historic Landmark. The Recorded Texas Historic Landmark text reads: "Founded in 1849 as Georgetown Mission, organized 1874 but still served then by circuit riders, this church acquired a resident pastor in 1879. Original building was erected in 1881-82 on the Southwestern University campus. The present church structure was built in 1891-93, of native limestone, hand-cut at this site. Physics professor Robert S. Hyer was the supervising architect. The floor plan is modeled after the Greek cross. Bishops A. Frank Smith (1889-1962) and W. Angie Smith (1894-1974), brothers, made decisions to enter the ministry in this church. Recorded Texas Historic Landmark – 1974". The National Register nomination form provides information very similar to the 1984 Historic Resource Survey entry.

Historic and Architectural Review Commission

APPLICABLE DESIGN GUIDELINES

The following guidelines are applicable to the proposed scope of work in accordance with the adopted Downtown and Old Town Design Guidelines:

GUIDELINES FINDINGS CHAPTER - CHAPTER NAME

8.27 Minimize the visual impact of mechanical equipment as seen from street.

- ✓ Do not locate window air conditioning units on the building's primary facade.
- ✓ Use low-profile mechanical units and elevator shafts on rooftops that are not visible from the public's view. If this is not possible, setback or appropriately screen rooftop equipment from view.
- ✓ Locate a satellite dish out of public view, to the extent feasible, and in compliance with other regulations.
- ✓ Paint mechanical equipment attached to the building fascia the same color as the fascia in order to blend into the building.
- ✓ When locating mechanical equipment be sensitive to views from the upper floors of neighboring buildings as well as other neighboring properties.
- ✓ Character defining features of existing buildings (i.e. roofline, chimneys, dormers) must be not be damaged or obscured when adding new roof mounted energy conservation systems such as solar devises.
- ✓ Skylights or solar panels should have low profiles and not be visible from the public right-of-way. These features should be installed in a manner which minimizes damage to historic materials.
- ✓ Solar shingles may be added to a roof surface visible from a public right-of-way if low or non-reflective shingles are used.
- ✓ Use solar panels and solar devices that are similar in color to roof materials and use non-reflective finishes.
- ✓ Solar panels should not be mounted to project from walls or other parts of the building.

Complies

The proposed access door installation has minimal visibility from the street as it is to be installed in a portion of the west building façade that is partially obscured by later additions to the west side of the original historic sanctuary building. Additionally, HARC previously approved the installation of an outdoor air louver in the same location. The access door has a similar size to the louver but a different orientation, and the top of the door opening will sit higher on the façade than the louver would have.

The applicant has also adjusted the locations of the rooftop HVAC units to be set further back from the façade, and provide sight line studies showing that the new units will be screened by the parapet walls and building additions.

Historic and Architectural Review Commission

CRITERIA FOR APPROVAL

In accordance with Section 3.13.030 of the Unified Development Code, the HARC must consider the following criteria:

SECTION 3.13.030 CRITERIA	FINDINGS
The application is complete and the information contained within the application is correct and sufficient enough to allow	Complies Staff reviewed the application and deemed it complete.
adequate review and final action;Compliance with any design standards of this Code;	Complies Proposed project complies with the applicable UDC requirements.
3. Compliance with the Secretary of the Interior's Standards for the Treatment of Historic Properties to the most extent practicable;	Partially Complies SOI Standard #9: "New additions, exterior alterations or related new construction will not destroy historic materials, features and spatial relationships that characterize the property. The new work will be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment."
	The proposed door installation would remove a portion of the stone façade to create an opening in the wall to access an attic space which will house portions of the updated HVAC system. Installing the door on the west wall above the existing building addition minimizes the visual impacts to the historic structure, and the proposed door is of a scale and appearance that are similar to the previously approved louver.
4. Compliance with the adopted Downtown and Old Town Design Guidelines, as may be amended from time to time, specific to the applicable Historic Overlay District;	Complies Proposed project complies with applicable Design Guideline.
5. The general historic, cultural, and architectural integrity of the building, structure or site is preserved;	Complies Although a portion of the stone façade is proposed to be removed for the installation of an access door, the west façade is the

Re: Letter of Intent for The First United Methodist Church, Georgetown, Sanctuary and Education Building

Dear Britin and Historic Planning Committee:

Jackson Galloway FGM Architects is working with First United Methodist Church to upgrade the HVAC system in the existing Sanctuary. We are locating two outdoor Air Handling Units, set back away from University Avenue. This is a change from the multiple units, previously set towards the north along University Avenue. This new HVAC system will no longer require the large aluminum louver, previously approved by HARC.

We will also be replacing the existing undersized wood hatch door. The new weather resistant hollow metal door will be accessed by stairs to allow better access for maintenance onto the existing interior catwalk above the Sanctuary ceiling. The new door will be painted to match the existing stone.

We look forward to your approval of the new HVAC and maintenance components.

Should you have any questions regarding the request or require additional information, please let us know.

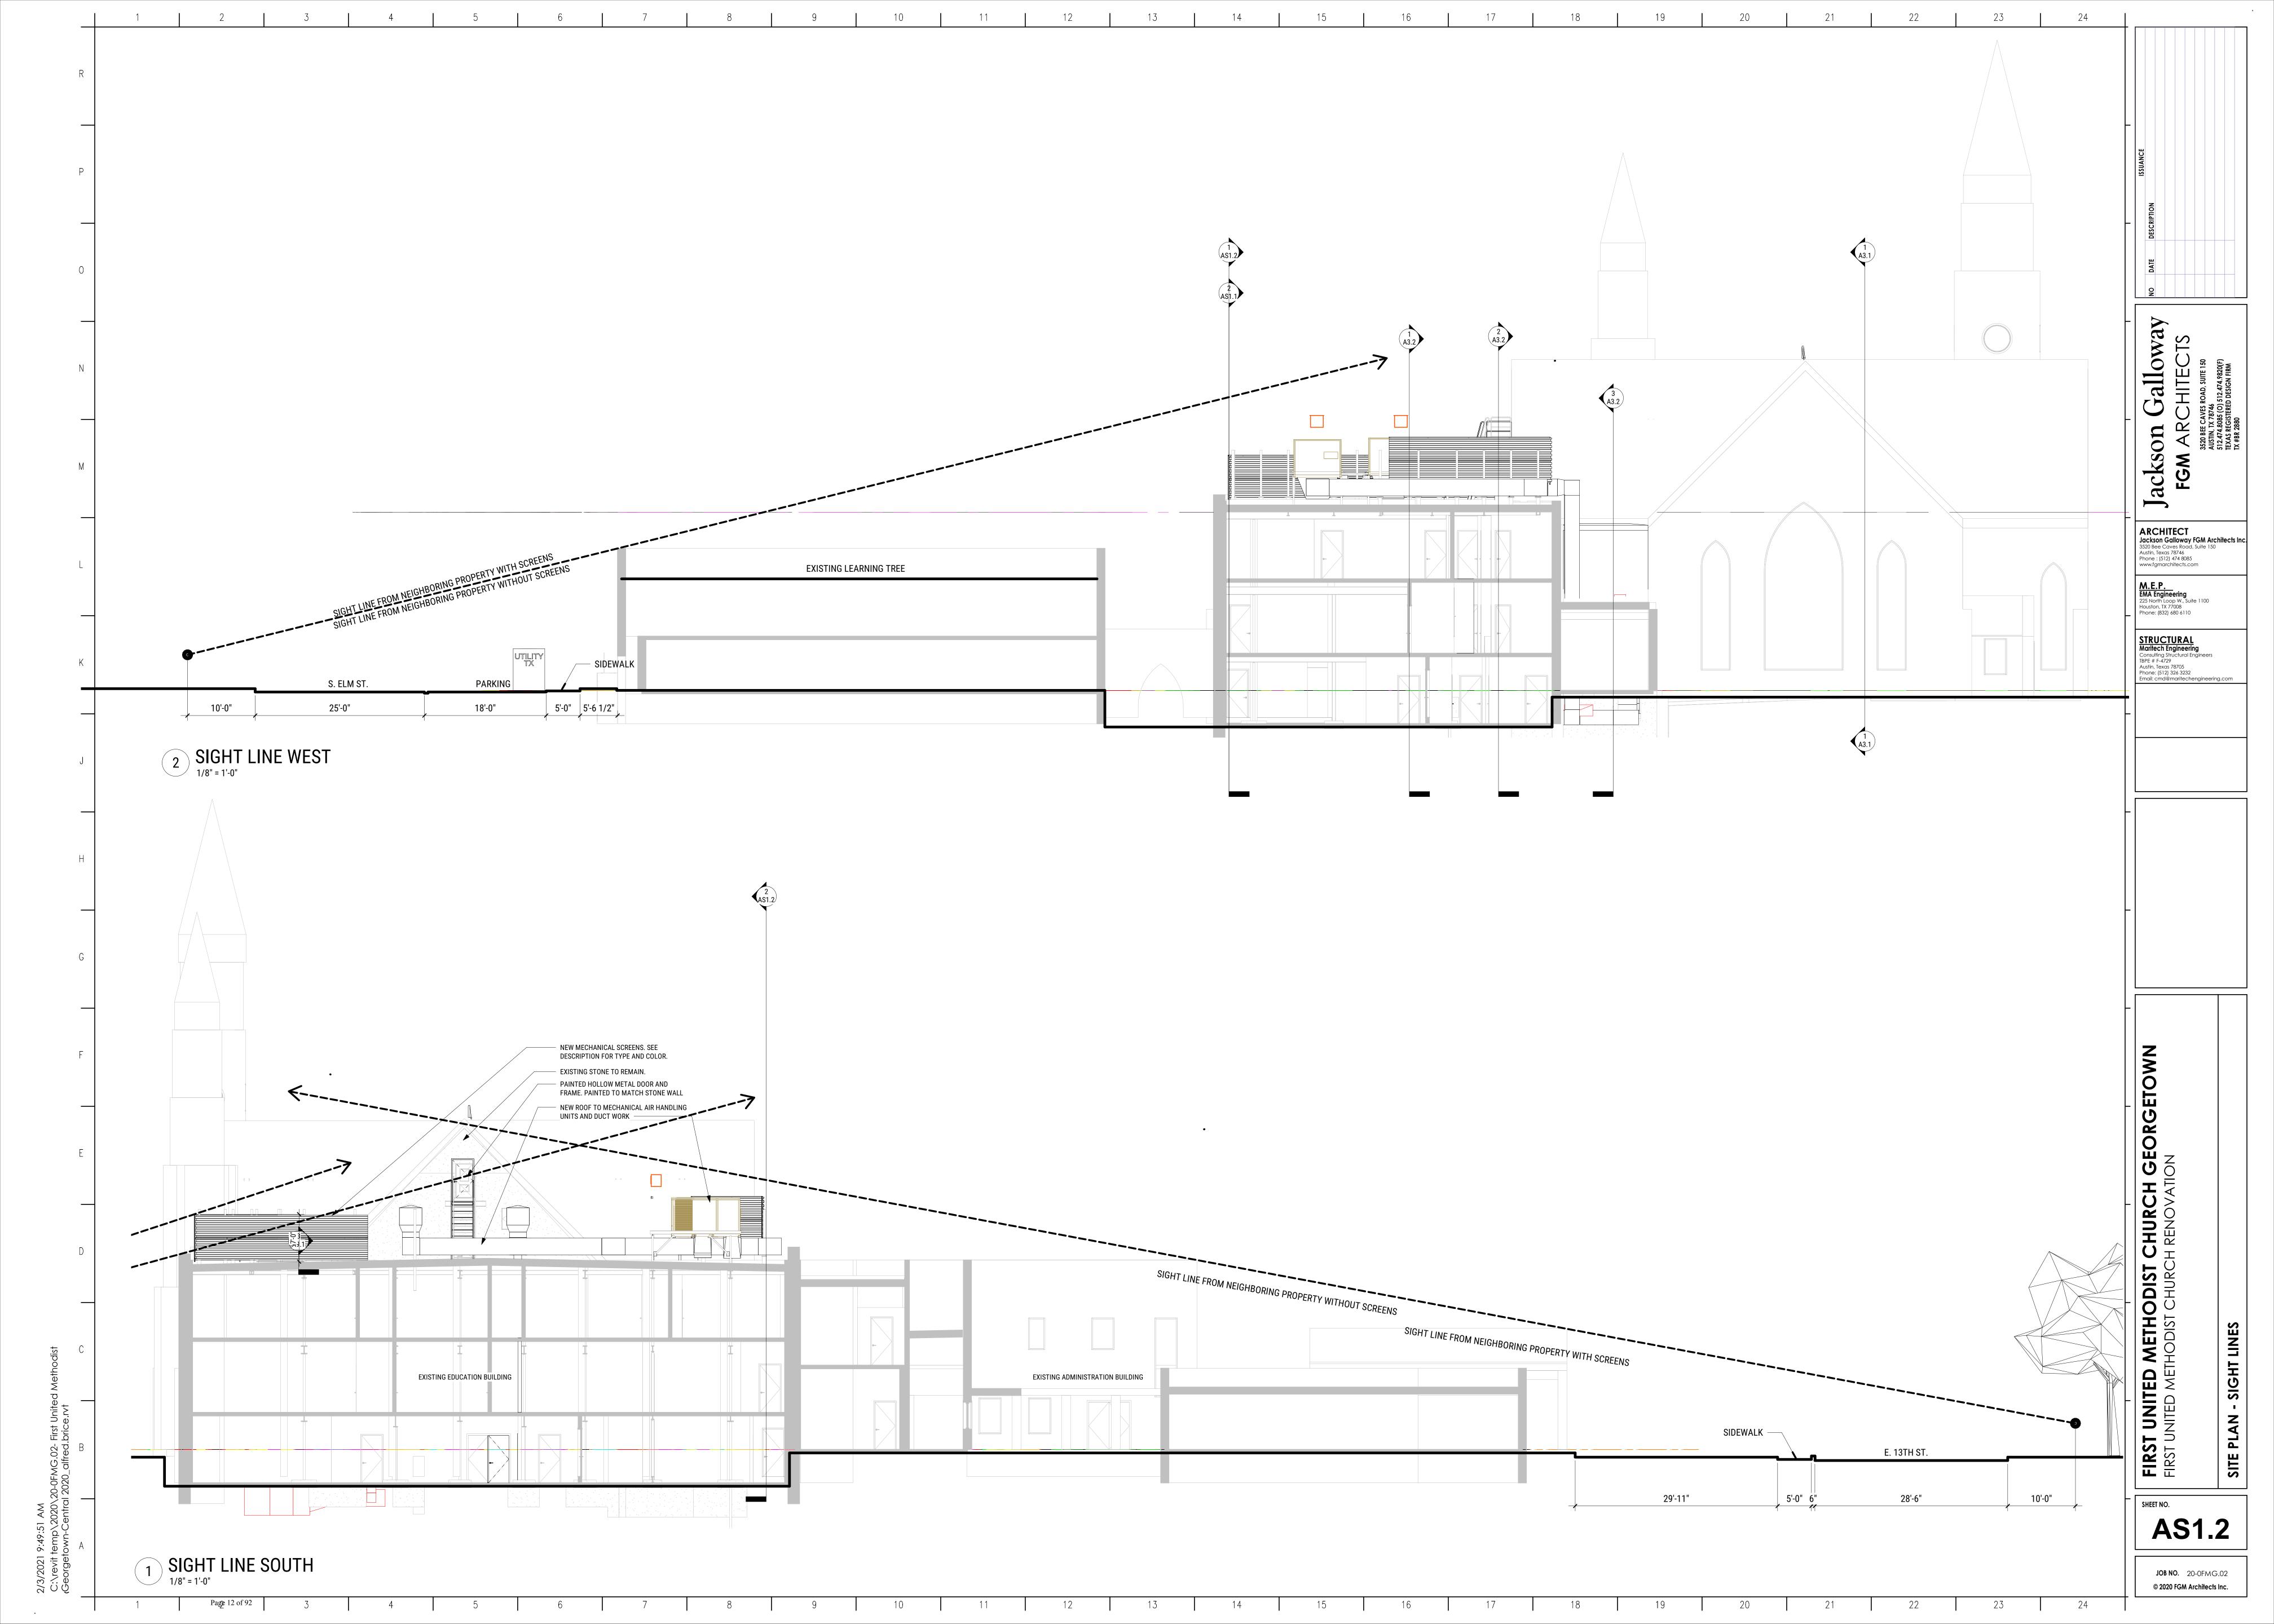

Sincerely,

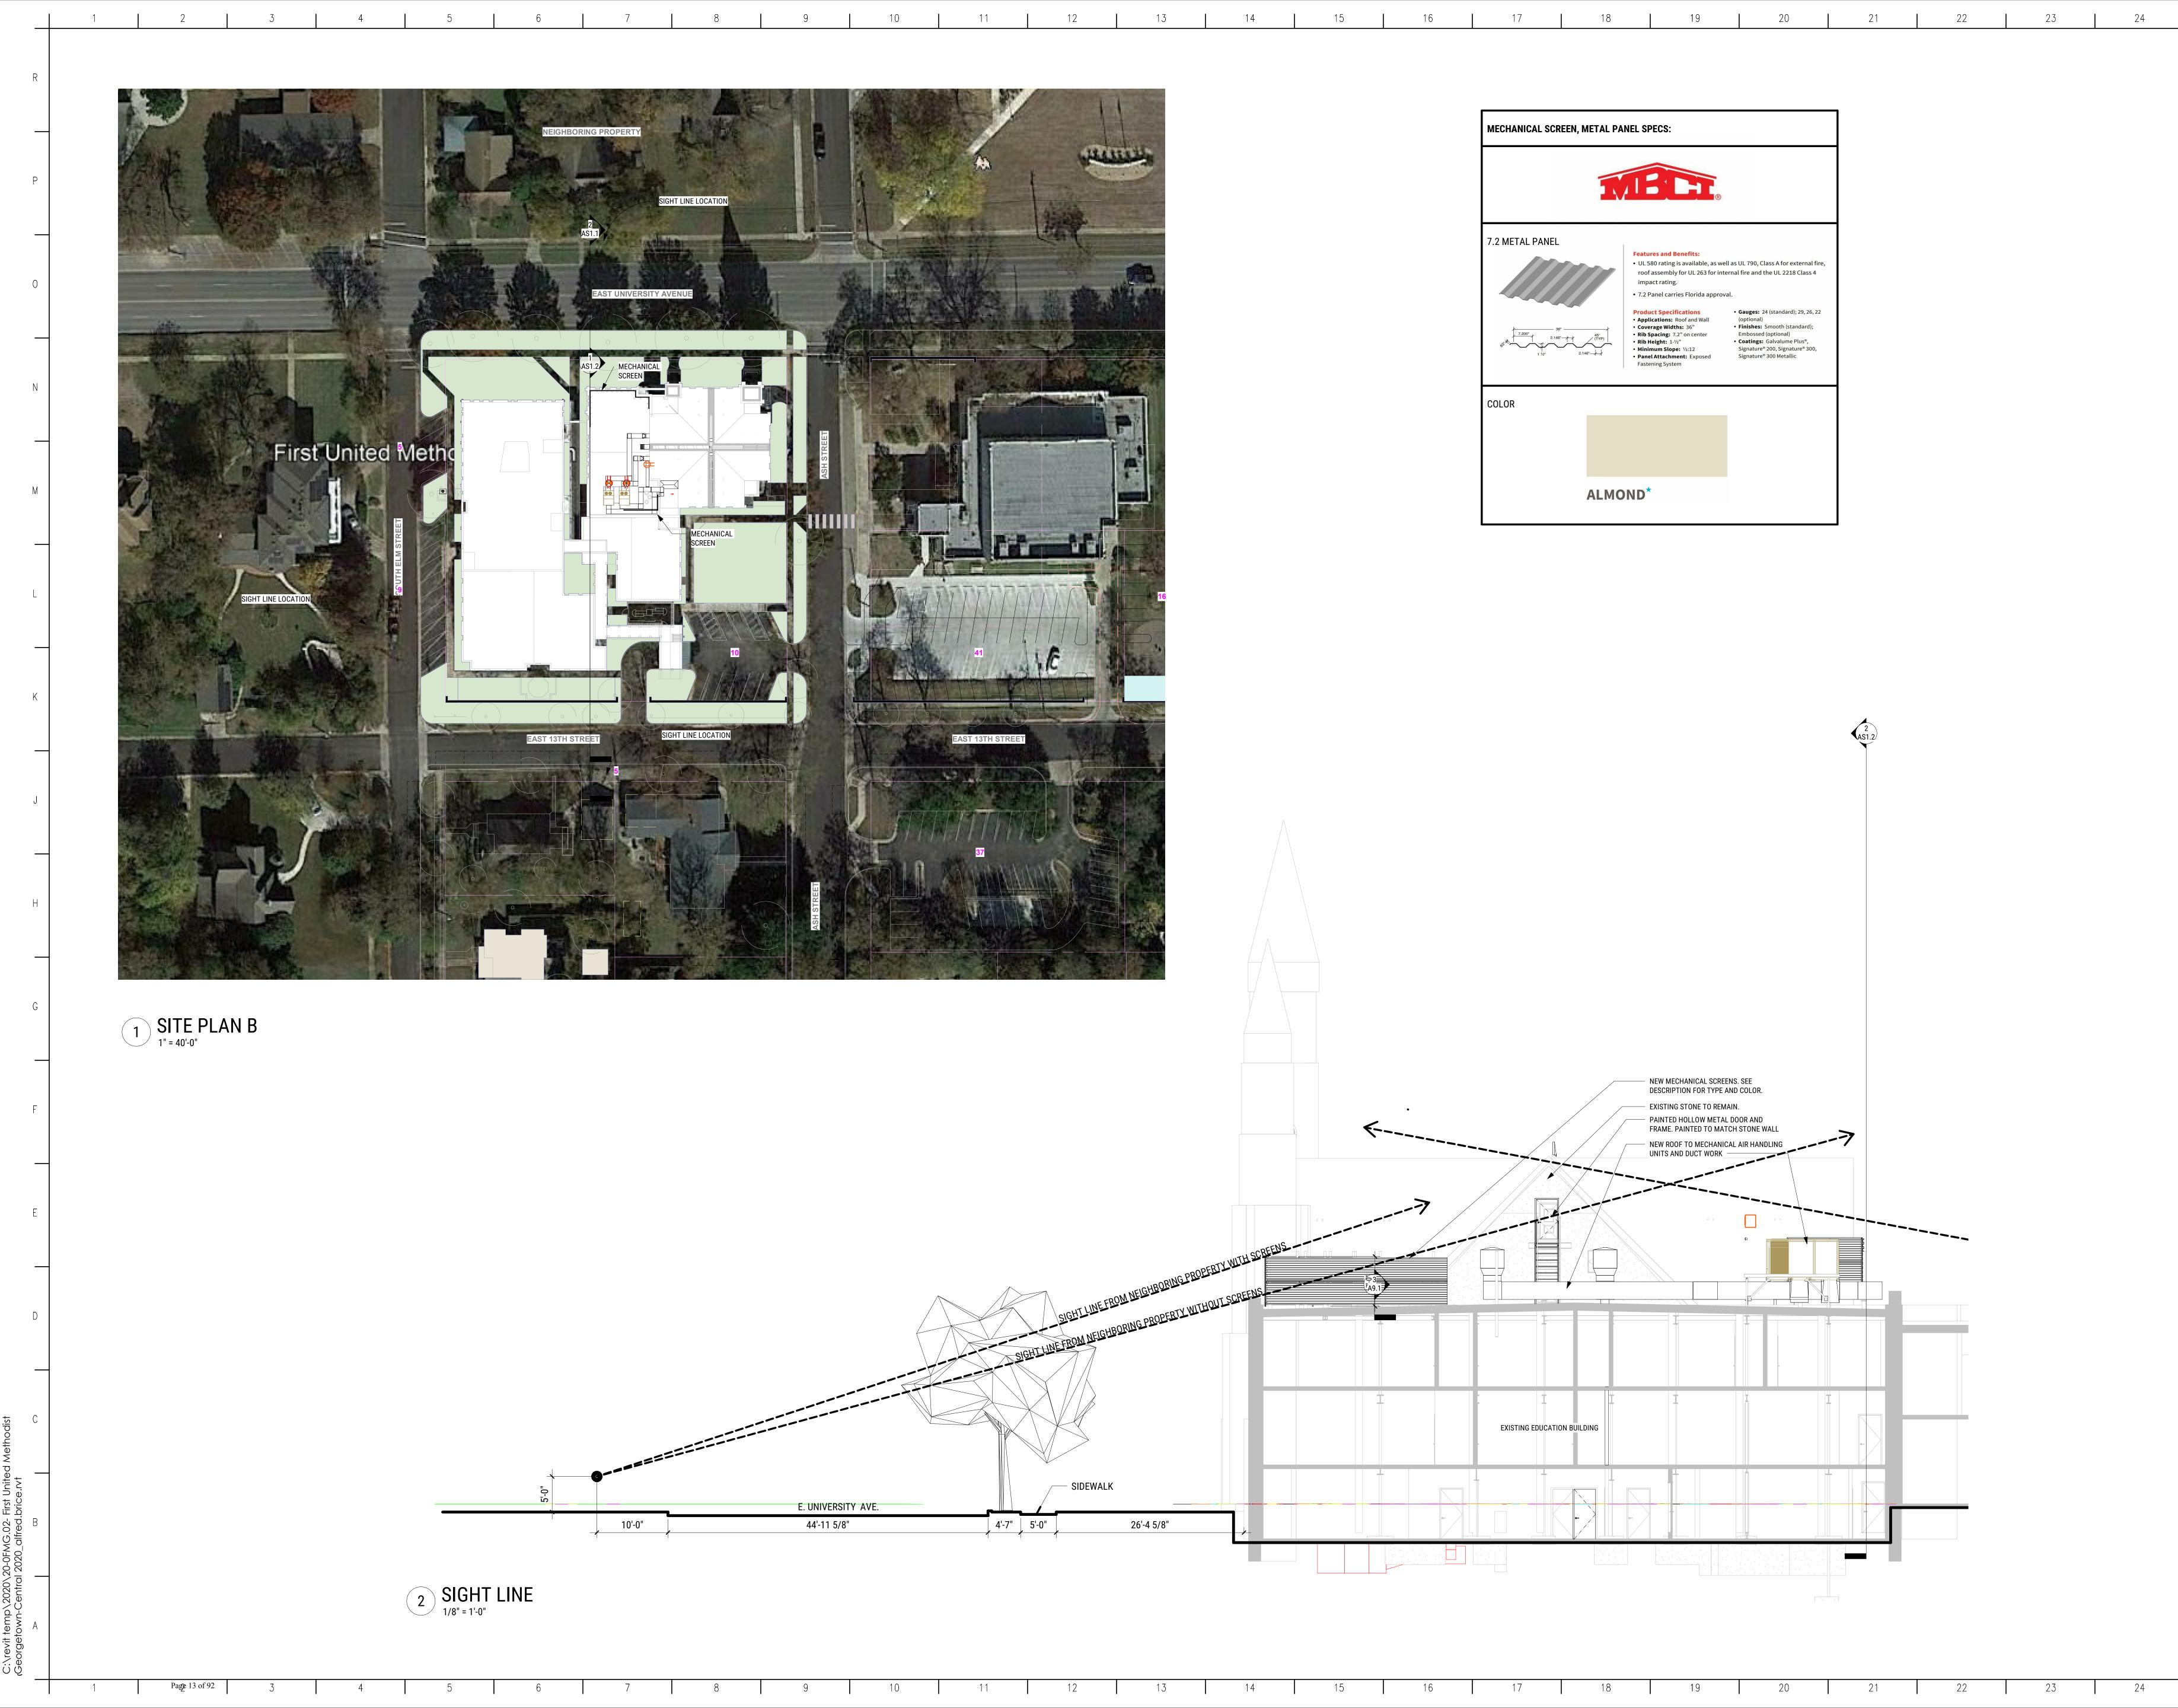

Alfred Brice, AIA, LEED AP

#12. Significance (cont'd): noteworthy for its superb craftsmanship. Designed by Dr. Robert S. Hyer, a physics profesor at Southwestern. Stonework completed by the Waterston family who had come from British Isles and who worked on State Capitol in Austin. Church organized in 1874 soon after Texas (later Southwestern) University was established in Georgetown. In 1930, education wing was completed which closely resembles the craftsmanship and design of the original structure; it is an important element to the church's historical and architectural evolution.

Extruded Aluminum Louvers EXD645 (1/2) March 2014

POTTORFF®

Application

The EXD-645 combination louver features stationary drainable louver blades to protect against water penetration and an integral control damper to allow positive shutoff protection of air intake and exhaust openings. The EXD-645 is available in a wide array of anodized and painted finishes including custom color matching. These units are also available with a variety of factory mounted electric or pneumatic actuators.

Standard Construction

Material: Mill finish 6063-T5 extruded aluminum.

Frame: 6" deep \times 0.081" thick (152 \times 2) channel.

Blades: 37.5° and $45^{\circ} \times 0.081''$ (2) thick combination style.

Screen: 1/2" × 0.063" (12.7 × 1.6) expanded and flattened

aluminum.

Axles: 1/2" (13) diameter plated steel hex.

Linkage: Concealed in frame.

Low Leakage Seals: PVC blade edge and flexible metal jamb.

Bearings: Synthetic. Mullion: Visible.

Minimum Size: 12" × 12" (305 × 305)

Maximum Size: Single section:

 $48" \times 96"$ (1219 × 2436) with low leakage seals. $60" \times 96"$ (1524 × 2436) without low leakage seals.

Multiple section: Unlimited

Options

- ☐ Factory finish:
 - ☐ High Performance Fluoropolymer 100% resin Newlar®/ 70% resin Kynar®
 - □ Baked Enamel
 - ☐ Clear or Color Anodized, Class 1
 - ☐ Prime Coat
- \square 1 $\frac{1}{2}$ " (38) flange frame.
- ☐ Welded construction.
- ☐ Alternate bird or insect screens.
- ☐ Insulated or non-insulated blank-off panels.
- ☐ Filter racks.
- ☐ Hinged frame.
- ☐ Head and/or sill flashing.
- ☐ Factory mounted electric or pneumatic actuator.

Pressure Loss

(Data corrected to standard air density)

Louver Test Size = 48" × 48" (1219 × 1219)

Pressure loss tested in accordance with Figure 5.5 of AMCA Standard 500-L.

Water Penetration

AMCA defines the beginning point of water penetration as the free area velocity at the intersection of a simple linear regression of test data and the line of 0.01 ounces of water per square foot of free area and is measured through a 48" 48" louver during a 15 minute period. The AMCA water penetration test provides a method for comparing louver models and designs as to their efficiency in resisting the penetration of rainfall under specific lab conditions. Pottorff recommends that intake louvers are selected with a reasonable margin of safety below the beginning point of water penetration in order to avoid unwanted penetration during severe storm conditions.

Selection Criteria

Follow the steps listed below to calculate the louver size needed to satisfy the required air volume while minimizing the adverse effects of water penetration and pressure loss.

- Determine the Free Area Velocity (FAV) at the maximum allowable pressure loss using the *Pressure Loss* chart to the left. While job conditions vary, typically, the maximum allowable pressure loss should not exceed 0.15 in.wg., and the FAV for 0.15 in.wg. pressure loss is listed on the front page of this sheet.
- 2. Intake Applications If the FAV at the Beginning Point of Water Penetration (shown below) is less than the FAV from step 1, then use the FAV at the Beginning Point of Water Penetration in step 3, otherwise use the FAV from step 1.

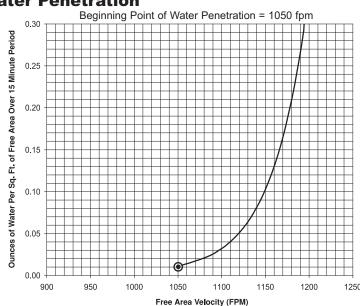

Exhaust Applications Use the FAV from step 1 in step 3.

3. Calculate the total louver square footage required using the following equation.

4. Using the Free Area chart above, select a louver width and height that yields a free area ft² greater than or equal to the required louver size calculated in step 3.

Water Penetration

Information is subject to change without notice or obligation.

NOTE: Dimensions in parentheses () are millimeters.

AGENDA ITEM DESCRIPTION

Public Hearing and Possible Action on a request for a Certificate of Appropriateness for the addition of a porch, patio or deck at the property located at 208 S. Austin Ave., bearing the legal description Lot 4, Block 9, City of Georgetown.

AGENDA ITEM DETAILS

Project Name: 208 S. Austin Ave.
Applicant: Danielle Watts

Property Owner: ACS Management Inc.
Property Address: 208 S Austin Ave.

Legal Description: Lot 4, Block 9, City of Georgetown

Historic Overlay: Downtown Overlay District

Case History: HARC approved a rear addition via COA-2016-042 that was not constructed.

HISTORIC CONTEXT

Date of construction: 1890 (HRS) – Public Records suggest 1895

Historic Resources Survey Level of Priority: High

National Register Designation: Individually Listed as the Imhoff House

Texas Historical Commission Designation: N/A

APPLICANT'S REQUEST

HARC:

Addition of a porch, patio or deck

STAFF ANALYSIS

The Applicant is requesting HARC approval for the addition of a rear wood deck and patio, which would be part of the W. 3rd Street façade. The deck and patio are proposed to have wood screening elements on the west façade, with a style similar to a contemporary pergola.

According to public records, E. F. Booty, likely Emory Few Booty born in 1860, sold Lot 4, Block 9 of the City of Georgetown to L. P. Imhoff in 1895 for \$350. Louis P. Imhoff was born in 1870 and died in 1942. Mr. Imhoff is alleged to have constructed the dam at the Blue Hole and is remembered to have had a machine shop. The executor of L. P. Imhoff's estate sold the property to Archie G. Harris in 1944 for \$2,250. After the death of Archie Harris in 1947, Florence Harris's children sold her their share of the property. The house was listed on the National Register of Historic Places in 1986, and the property remained in the Harris family until 2015.

Planning Department Staff Report

Historic and Architectural Review Commission

In 2015 the rear addition, visible on the 1916 Sanborn Map, was declared a dangerous structure by the City of Georgetown and it was subsequently demolished. A COA application from 2016 requested approval of a rear addition to the house and detached carport, which were approved. The project was not completed, however, and the current applicant is requesting approval of the addition of an approximately 410 sq. ft. rear deck and patio, designed similarly to a pergola, with horizontal screening on the west side. The existing house is approximately 600 sq. ft. with a front porch. Additional proposed improvements include landscaping and a new driveway.

APPLICABLE DESIGN GUIDELINES

inappropriate.

The following guidelines are applicable to the proposed scope of work in accordance with the adopted Downtown and Old Town Design Guidelines:

GUIDELINES FINDINGS CHAPTER 7 – DESIGN GUIDELINES FOR ADDITIONS & ALTERATIONS 7.1 Avoid alterations that would damage historic Complies features. 2021-1-COA – 208 S. Austin Ave.

LETTER OF INTENT

PROJECT: 208 S. AUSTIN AVE. GEORGETOWN, TEXAS 78826

To The Historic Architectural and Review Commission.

Thank you for taking the time to review our proposed project regarding 208 S. Austin Ave. As you will see detailed below the proposed modifications are primarily regarding the addition of a back porch/patio which integrates landscaping and pathways for functionality and aesthetic appeal. The project and explanations are as follows:

Deck/Pergola Project Description:

We are proposing the addition of 330 sq ft wood deck with pergola to the rear of the existing structure. The existing structure does not have a porch/patio at present, but some form will be required as the back of the house and rear door are significantly elevated. The porch will be constructed utilizing cedar which will be sealed. It runs the length of the back exterior of the house and includes steps down the left side of the porch connecting to the pathway leading to the proposed driveway. It will integrate landscaping in the surround for privacy and aesthetics. The patio will have a cedar pergola with a partial slated section to assist with privacy. Both of these will be constructed from cedar and sealed and/or stained for a natural look. The porch will function as the necessary step down from the house, and as additional usable exterior space for the property that does not require any addition or alteration to the existing and historic structure.

Deck/Pergola Explanation/Support of Design Guldelines:

Respect the Historic Character of the building: The deck/pergola respects the character of the building in that it both accentuates and complements the original structure, and does not take away from or hide any historic features.

Project: 208 S. Austin Ave. Georgetown, Texas 78626

Seek uses that are compatible with the historic character of the building: The building was built as a residential property and historically has been used as such. We are told, by a 90-year-old woman who stopped by (and was born in the home), that it was built /lived in by a Mr. Imhoff and was for a while the closest home to Blue Hole. She informed us it was well known for its proximity to the popular swimming spot (fun facts). As the original structure is quite small, the porch adds significant value in the usable living space. It also allows for additional measures of privacy on a busy intersection, while adding to the curb appeal of the historic structure. It allows for a usability and functionality that benefits and adds to the original home and keeps it more residential in nature.

Protect and maintain significant features and stylistic elements: All of the historic features or stylistic elements of the original structure will be maintained and continue to be visible. The deck/pergola does not interfere with any. The choice of natural/neutral elements and clean lines, allows for the historic and original features to stand out and be accented well.

Preserve key, character-defining features of the property: None of the character features of the home will be removed or less visible due to the porch addition. The porch accentuates the home and adds visual appeal to the original structure and property.

Repair deteriorated historic features, and replace only those elements that cannot be repaired: No historic features will be removed/damaged by this addition. There is currently no back porch/steps, etc. What was originally on the rear of the property is unknown to us but some form of back porch/step down will be required for this property.

Porch Specific:

- Protects the rear entrance from rain and provides shade in the summer.
 Additionally, it will add some level of protection to the rear of the home, which is the original structure.
- While construction of a non-original porch is usually inappropriate, the build
 of the original house requires the addition of an exterior step down from the

Project: 208 S. Austin Ave. Georgetown, Texas 78626

- rear. As the original house itself is very small, the porch enhances the available useable space of the property while protecting the original structure as is. It is unknown what, if any, original porch structure did exist.
- I would like to address the detailing of the deck being compatible with style
 of the structure. While the proposed deck/pergola is more modern than the
 style of the structure itself, it works to incorporate natural elements (wood,
 landscaping, decomposed granite). These natural elements accentuate the
 wood window frames/doors and integrate with the existing style of the home,
 complementing the main structure and having no major impact on the original
 building.

Current Property Photos:

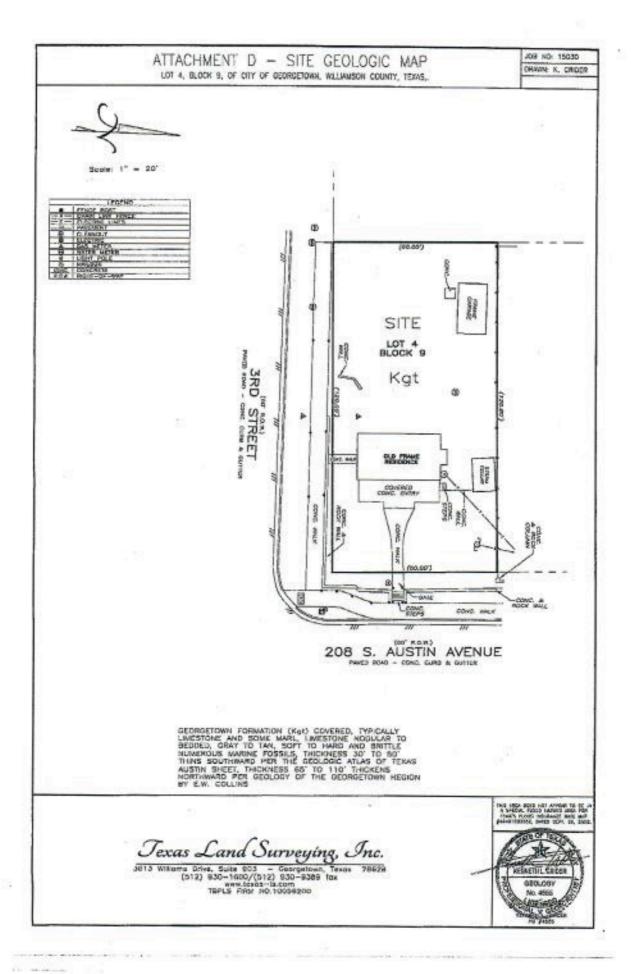

THANK YOU FOR YOUR CONSIDERATION IN THIS MATTER. PLEASE REACH OUT WITH ANY QUESTIONS YOU MAY HAVE.
